NATUREMILL SHOWCASES AUTOMATIC COMPOSTERS AT GREENFESTIVAL SF

San Francisco, CA, November 10, 2006 -- NatureMill, Inc. showcases automatic composters at the Green Festival in San Francisco. This is the largest sustainability event in the world presenting innovative and new green technologies.

“This is a unique opportunity to showcase our products in the hub of the environmental movement and in our own back yard,” says Russ Cohn, founder and president of NatureMill, Inc.

The NatureMill 5100 exhibits the latest in composting technology. It recycles its weight in waste every 10 days, diverting over two tons of waste from landfills over its life. This reduces emissions of methane, a harmful greenhouse gas produced when organic matter decomposes in oxygen-starved landfills. Furthermore, compost returns nutrients to the environment, reducing our need for chemical fertilizers. Regarding its efficiency the NatureMill uses 5 kwh per month of energy - or about \$0.50 per month.

The NatureMill composters allow ordinary home users to turn food waste into compost fertilizer, reducing landfill trash and resultant greenhouse gas emissions, while returning valuable organic nutrients to the soil.

Millions of people already compost in their backyard using a variety of do-it-yourself means. Unfortunately, these techniques are susceptible to raccoons, cold weather, and general lack of time or commitment on behalf of mainstream consumers.

NatureMill automates and miniaturizes the composting process, such that anyone can compost in the comfort of their kitchen.

More information about the NatureMill composters can be found at www.naturemill.com

About NatureMill Inc.

Founded in 2004 in San Francisco, NatureMill is devoted to making composting easy and accessible to everyone. NatureMill composters have been sold in 27 countries and are busy diverting four thousand tons of waste from landfills worldwide.
