

## **NATUREMILL AND HOMEDEPOT ANNOUNCE DISTRIBUTION PARTNERSHIP**

**San Francisco, CA, May 28, 2007--** NatureMill, Inc and Home Depot Canada announce new distribution partnership for automatic indoor composters. Home Depot Canada is leading the way in home improvement products so the partnership makes sense given that NatureMill is the leader in indoor home composting.

“We value the environment and it’s important for us to have eco-products that help households be green”, says Erin Vannus, Category Manager at Home Depot. “Plus this product is the first of its kind making composting easy and that is what our customers want.”

This strategic partnership aids existing independent dealers by increasing the awareness of composting products and their environmental benefits of turning food waste into fertilizer.

NatureMill brings composting to the home user. It is essentially a miniature in-vessel system. Waste is collected right where it is generated—in the kitchen. A computer controls the temperature, air flow, moisture, and mixing to accelerate the process and eliminate the backbreaking work. Everything is fully self contained in a modern, attractive container. Just a few square feet of floor space is required. No special plumbing or electrical connections are needed, other than a standard electrical outlet. There is no need to handle and transport the rotting material.

Best of all, NatureMill provides home gardeners with a source of rich, organic fertilizer. And there is something uniquely satisfying about witnessing the entire food chain: from the garden, to the dining table, and back to the garden again.
